

ALPHA CALLISTO

Discrete Input Interface Device

Interfaces with any Alpha LED Display

The Alpha Callisto Discrete Input Interface Device integrates Alpha LED Displays with fire panels and emergency notification systems from the leading providers.

Display pre-programmed, first response, priority messages at the flip of a switch or contact closure.

Use the Alpha Callisto to trigger and display messages from manufacturing processes, security systems, and any application that must provide visual alerts or messages to employees, customers, or visitors.

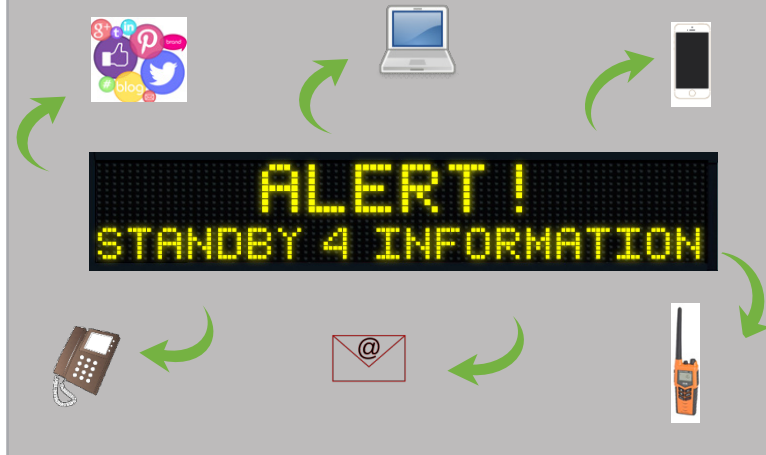

Using the Alpha Callisto with Alpha LED Displays

- Each Alpha Callisto device has 8 sensor-based inputs.
- Each input is associated with a stored custom message in an Alpha display.
- Sensor-based activity on an input triggers and displays its respective message on the attached Alpha LED Display.
- Chaining up to 4 Alpha Callisto devices together will provide up to 32 contact closures that can trigger 32 messages.

Benefits

- Fire panels and sensors can trigger specific messages.
- Provide visual messaging to the hearing-impaired
- Provide visual notification of room, door, and area status.
- Provide Mass Notification System messages.

ALPHA RGB LED DISPLAYS

Designed and built in the USA using USA-manufactured and imported parts.
